EMAT at CatCHy

Seeing is Believing

State of the Art Transmission Electron Microscopes:

- TEM + STEM
- Acceleration voltage between 60-300 kV
- Spatial resolution down to: 70 pm in STEM and 50 pm in TEM.
- Highly efficient EDX system (atomic resolution)
- Fast ThermoFisher Ceta camera
- EELS and Direct electron detectors

EMAT at CatCHy

Our main contributions to CatCHy:

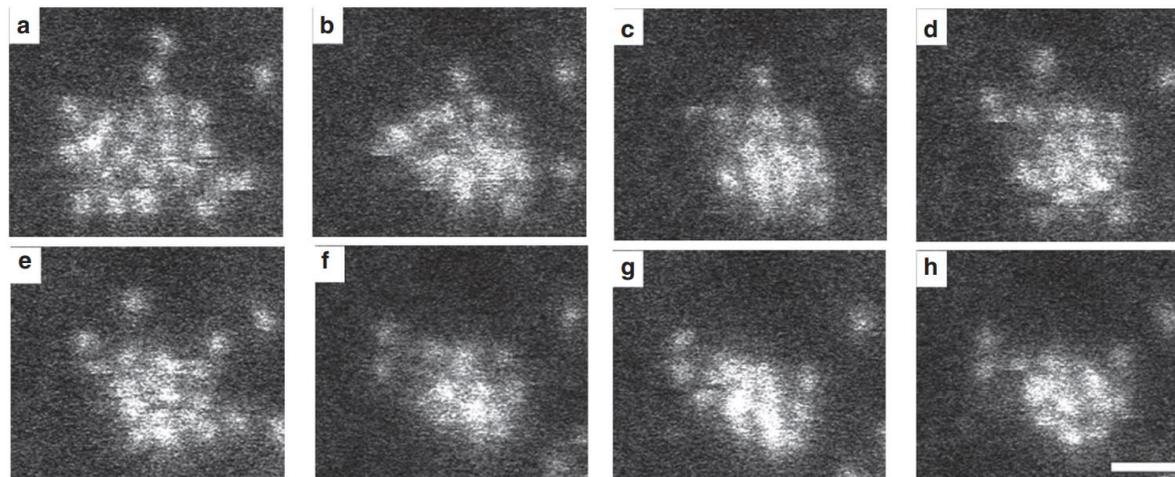

- Electron tomography (down to atomic level)
- TEM for nanomaterials in real conditions

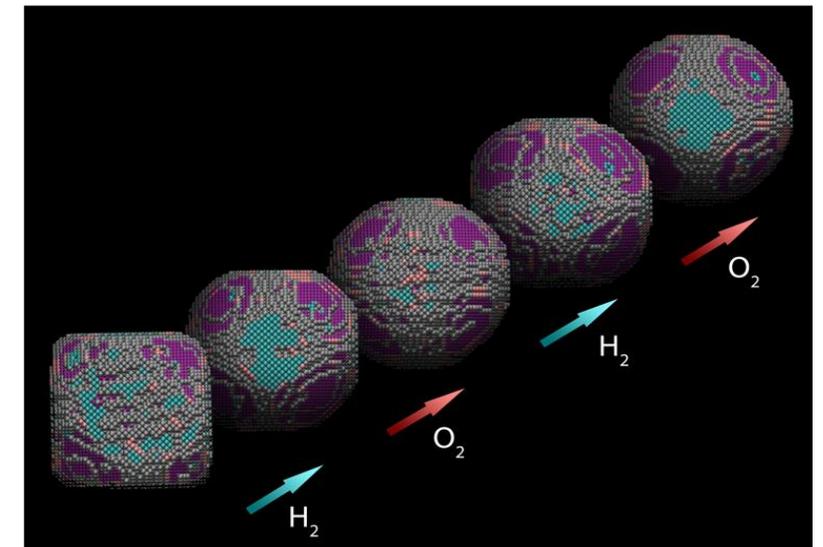

Prof. Sara Bals

Prof. Thomas Altantzis

S. Bals, S. Van Aert, *Nat. Commun.*, vol. 3, no. **May 2012**

T. Altantzis, I. Lobato, A. De Backer et al, *Nanoletters*, **2019**, **19**, 477-481

Work Packages

- **WP2: Characterization of Deposited Clusters.**

Study the structure, morphology and composition using aberration corrected (S)TEM.
Investigate the deposited clusters under reactive environment with *in situ* TEM

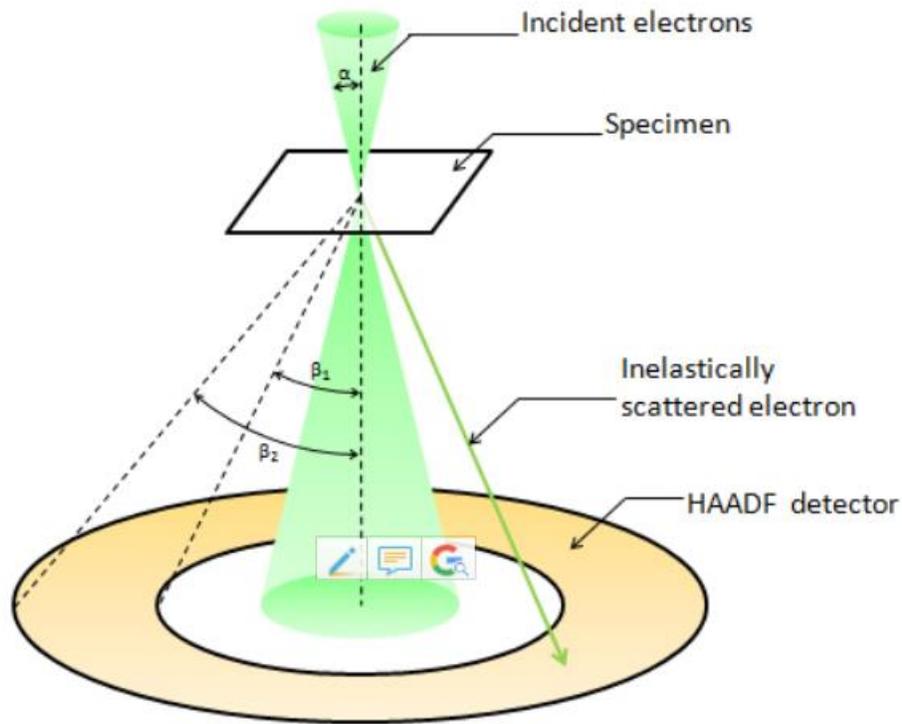

- **WP5: Catalysts Testing** and Prototyping a Model Gas Diffusion Electrode.

The high performing catalysts from TCs and ECs will be characterized in operando conditions using *in situ* TEM.

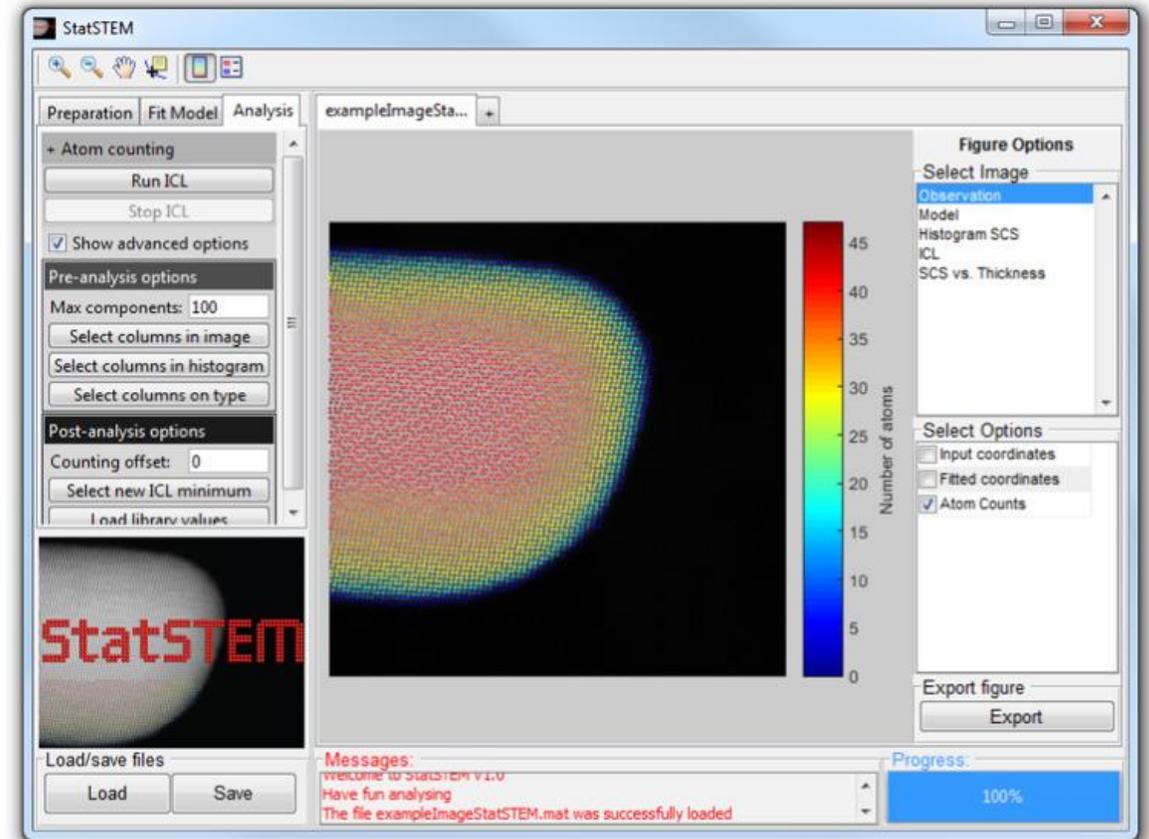

Results obtained

- Structural, morphological and compositional characterization for clusters provided by our partners at TCL and KUL.
- Particle size distribution analysis for the provided clusters.
- Atom Counting.

Data Acquired: HAADF STEM , and Atom counting

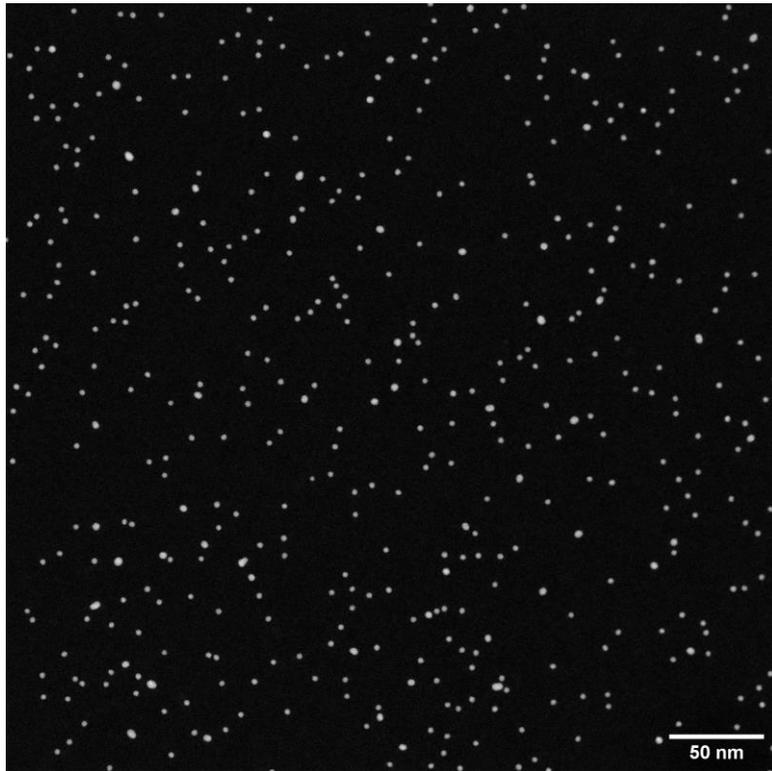

HAADF detector

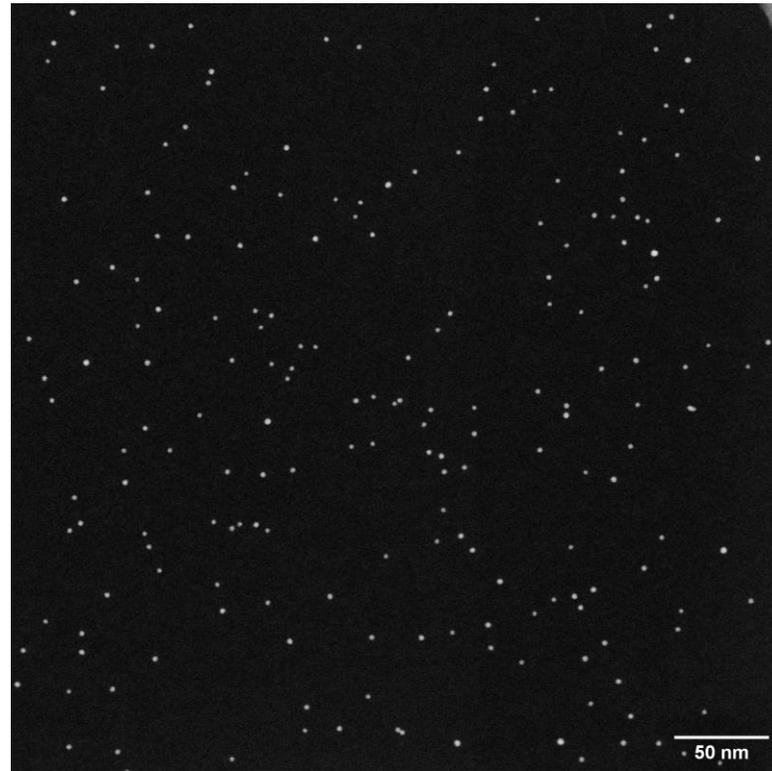

StatSTEM

Au clusters from Dimitra Papamichail (ESR 8@KUL)

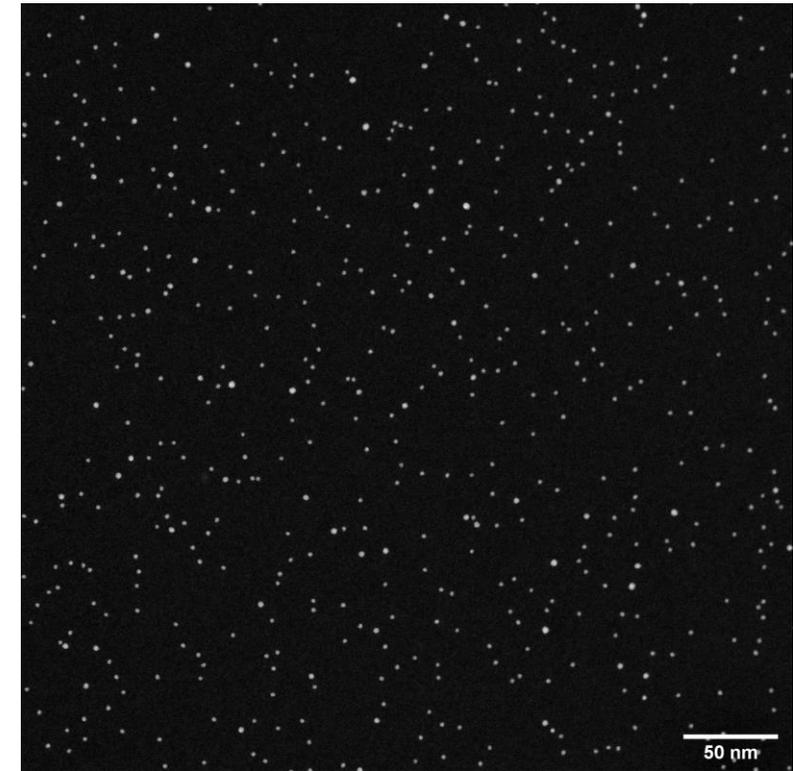

HAADF STEM images

Sample 1: $V_{bender} = 20 \text{ V}$

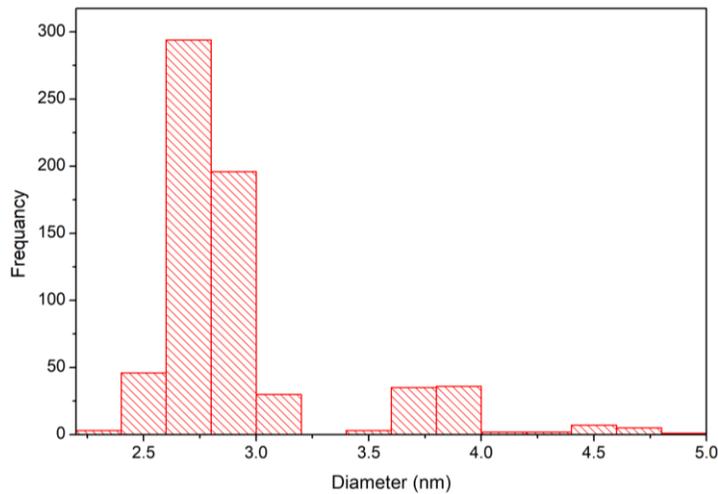

Sample 2: $V_{bender} = 15 \text{ V}$

Sample 3: $V_{bender} = 10 \text{ V}$

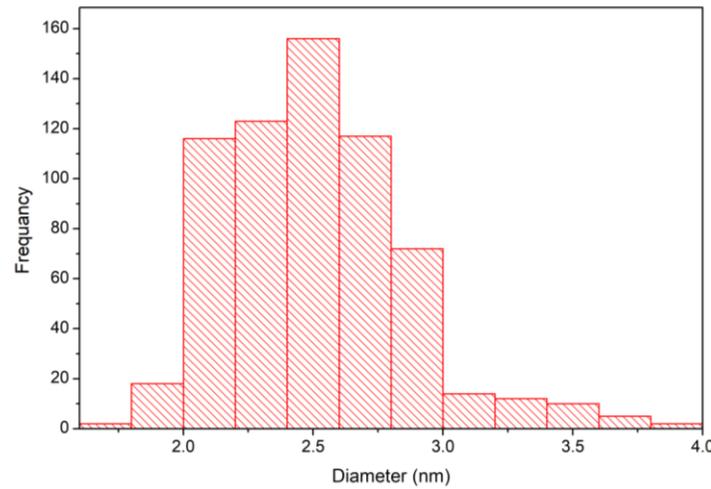

Au clusters from Dimitra Papamichail (ESR 8@KUL)

Particle size distribution

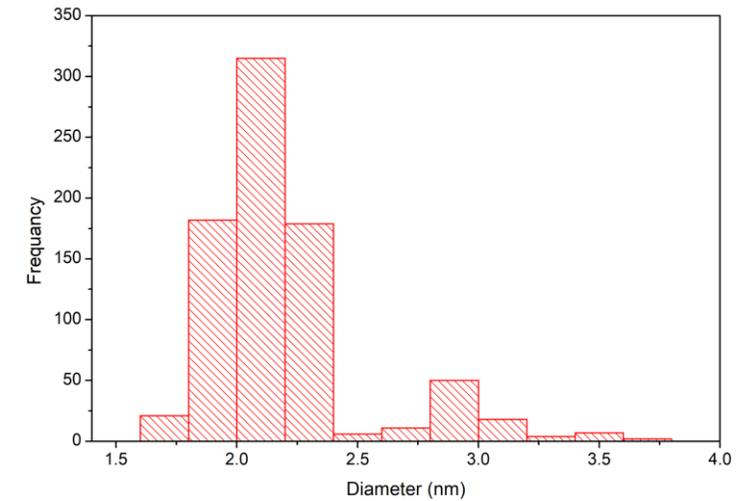

Diameter_{average} = 2.931 ± 0.017 nm
 Polydispersity = 14.7 %
 Surface coverage_{2D} = 1.811 ± 0.011 %

Sample 1: V_{bender} = 20 V

Diameter_{average} = 2.500 ± 0.014 nm
 Polydispersity = 13.9 %
 Surface coverage_{2D} = 0.547 ± 0.025 %

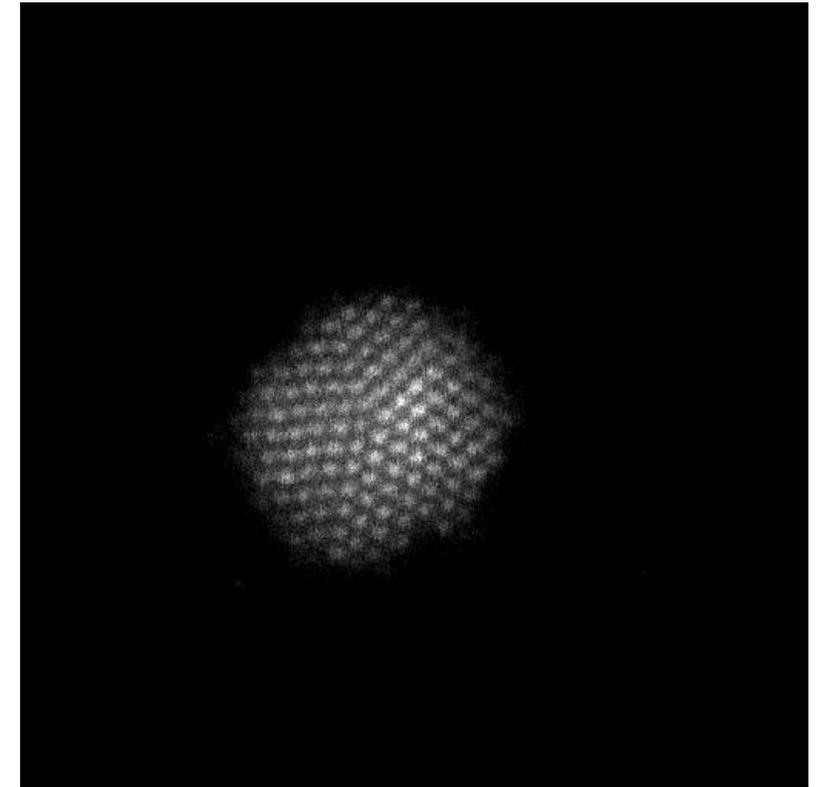

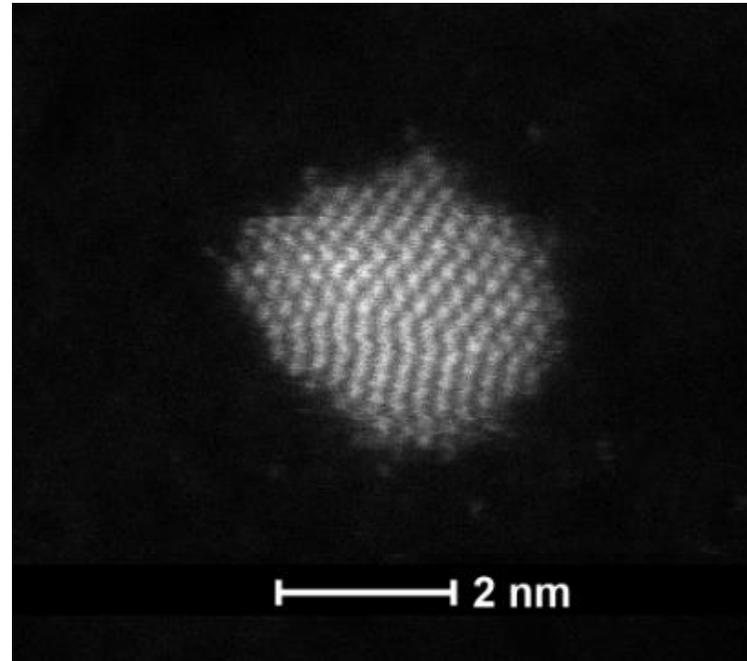

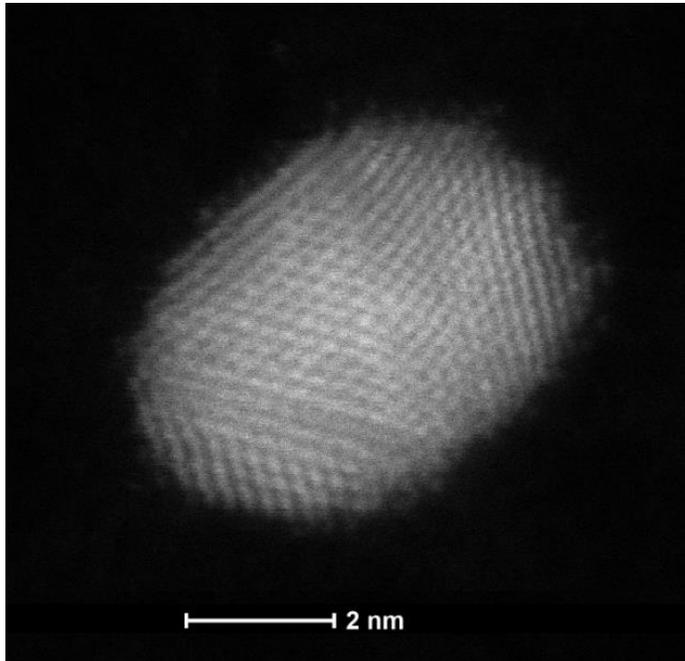

Sample 2: V_{bender} = 15 V

Diameter_{average} = 2.196 ± 0.012 nm
 Polydispersity = 15.1 %
 Surface coverage_{2D} = 1.205 ± 0.074 %

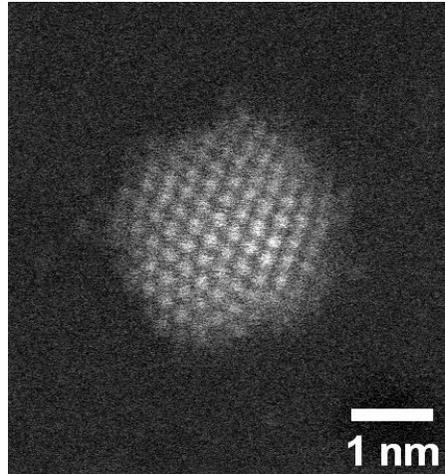

Sample 3: V_{bender} = 10 V

HAADF HRSTEM images, crystalline structure

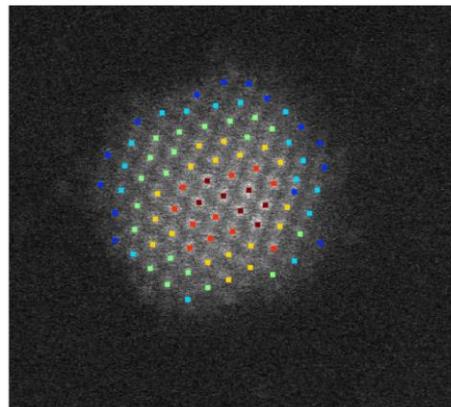

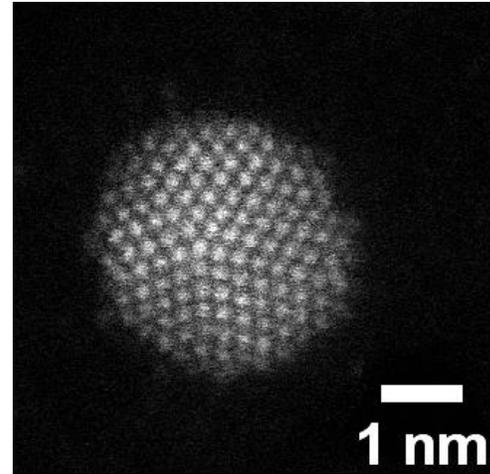

Atom counting

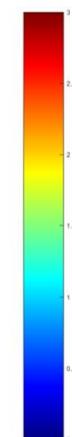

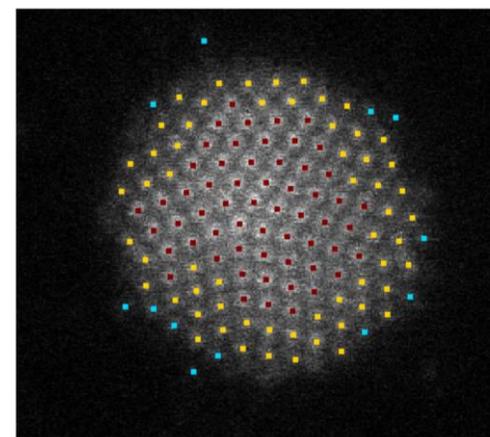

2.5 nm cluster

3 nm cluster

275 atom

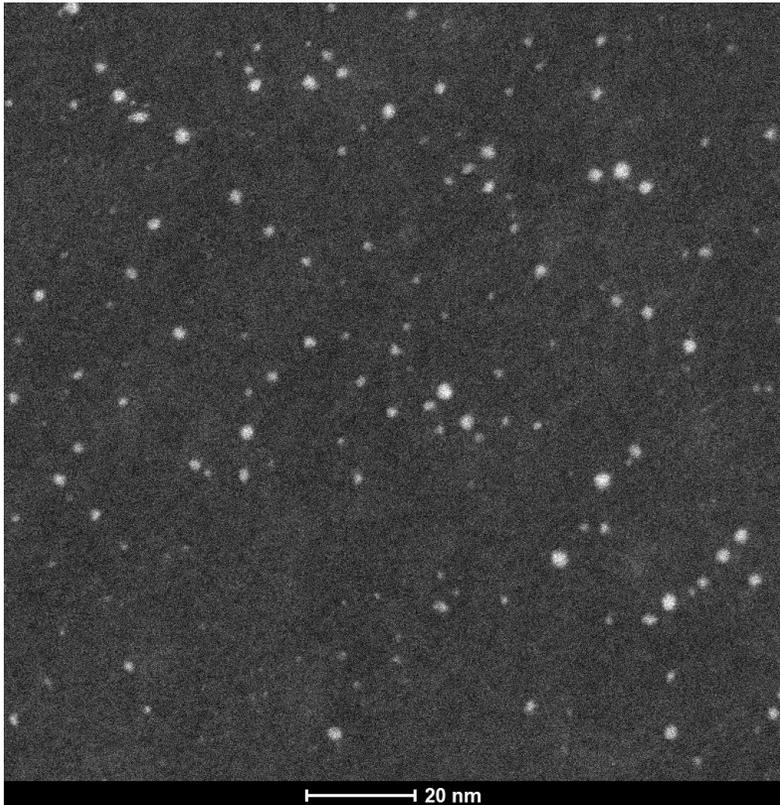

307 atom

 Dynamics Simulations

Pd clusters from João Coroa (ESR 2@TCL)

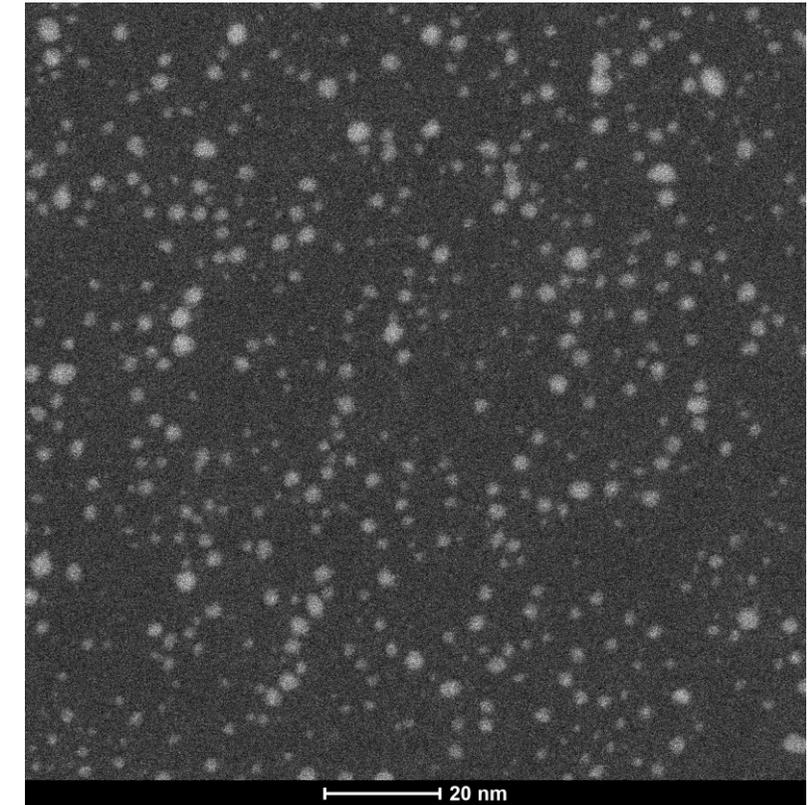

HAADF STEM images

Sample 1: loading= 1.2 $\mu\text{g}/\text{cm}^2$

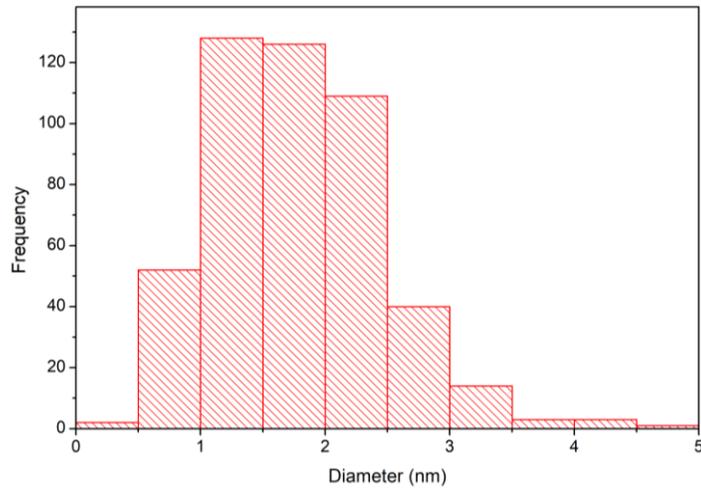

Sample 2: loading= 3.6 $\mu\text{g}/\text{cm}^2$

Sample 3: loading= 6 $\mu\text{g}/\text{cm}^2$

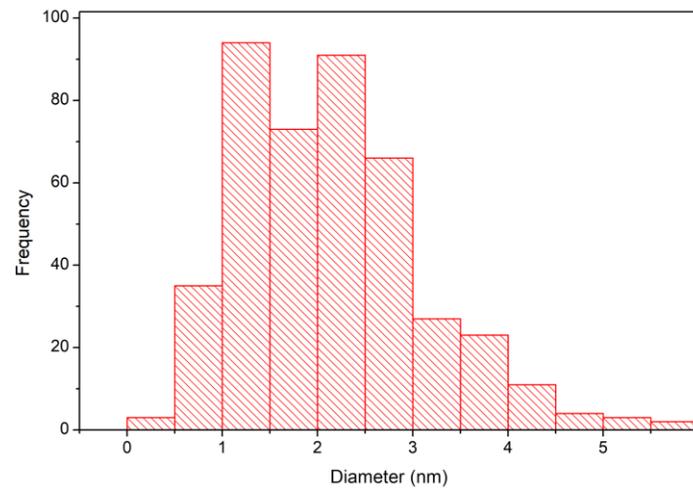

Pd clusters from João Coroa (ESR 2@TCL)

Particle size distribution

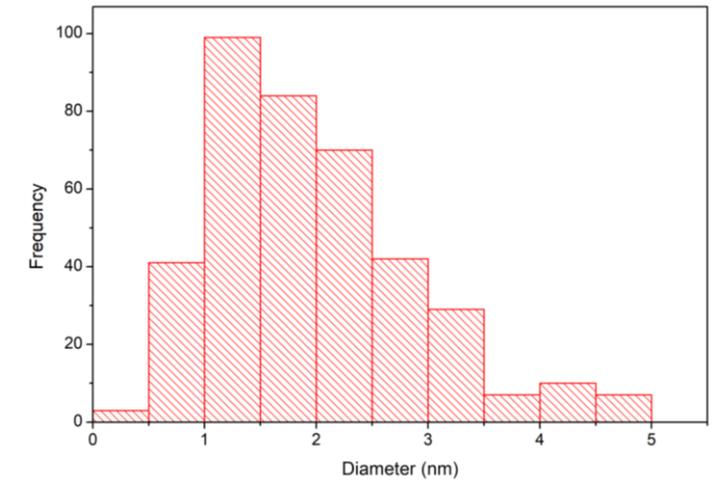

Equivalent Diameter_{average} = 1.700 ± 0.0870 nm

Sample 1: loading= 1.2 μg/cm²

Equivalent Diameter_{average} = 1.946 ± 0.0959 nm

Sample 2: loading= 3.6 μg/cm²

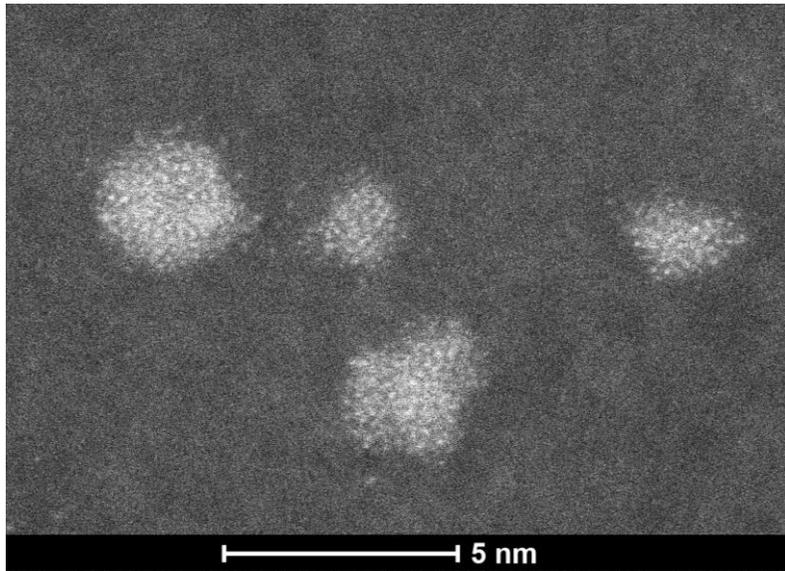

Equivalent Diameter_{average} = 1.692 ± 0.0467 nm

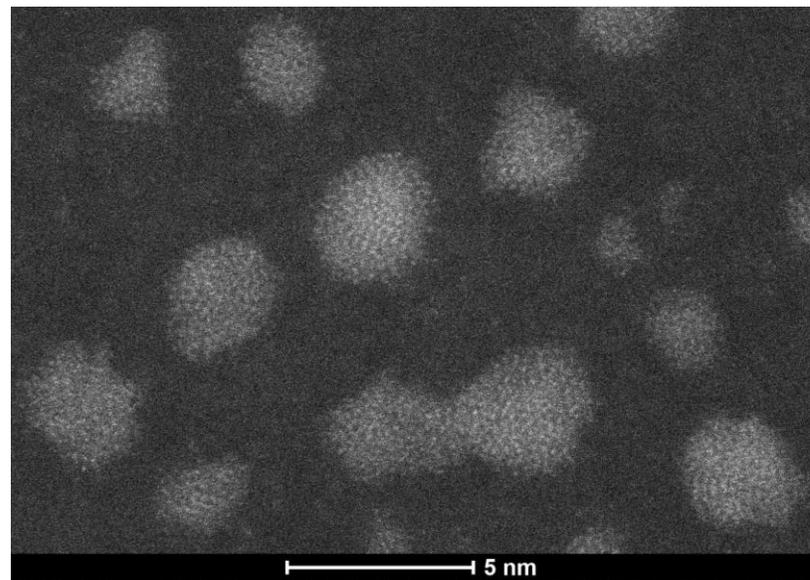

Sample 3: loading= 6 μg/cm²

Pd clusters from João Coroa (ESR 2@TCL)

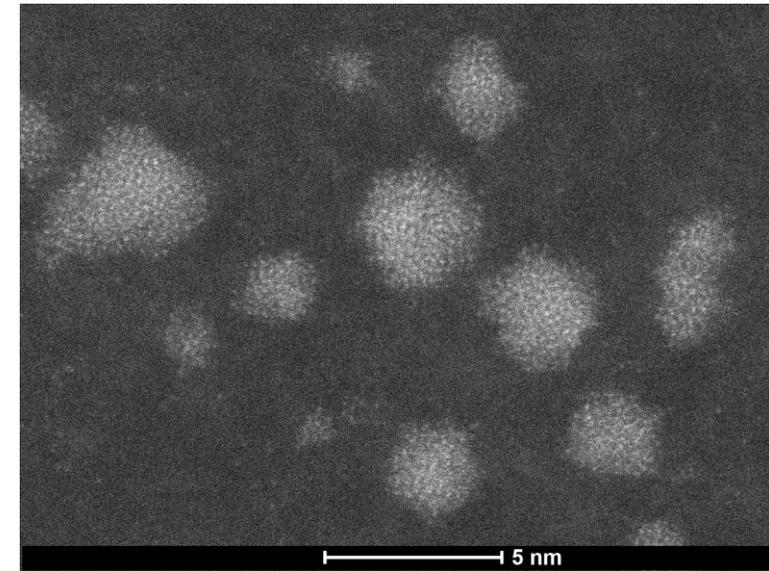

High magnification STEM image, No crystalline structure

Sample 1: loading= 1.2 $\mu\text{g}/\text{cm}^2$

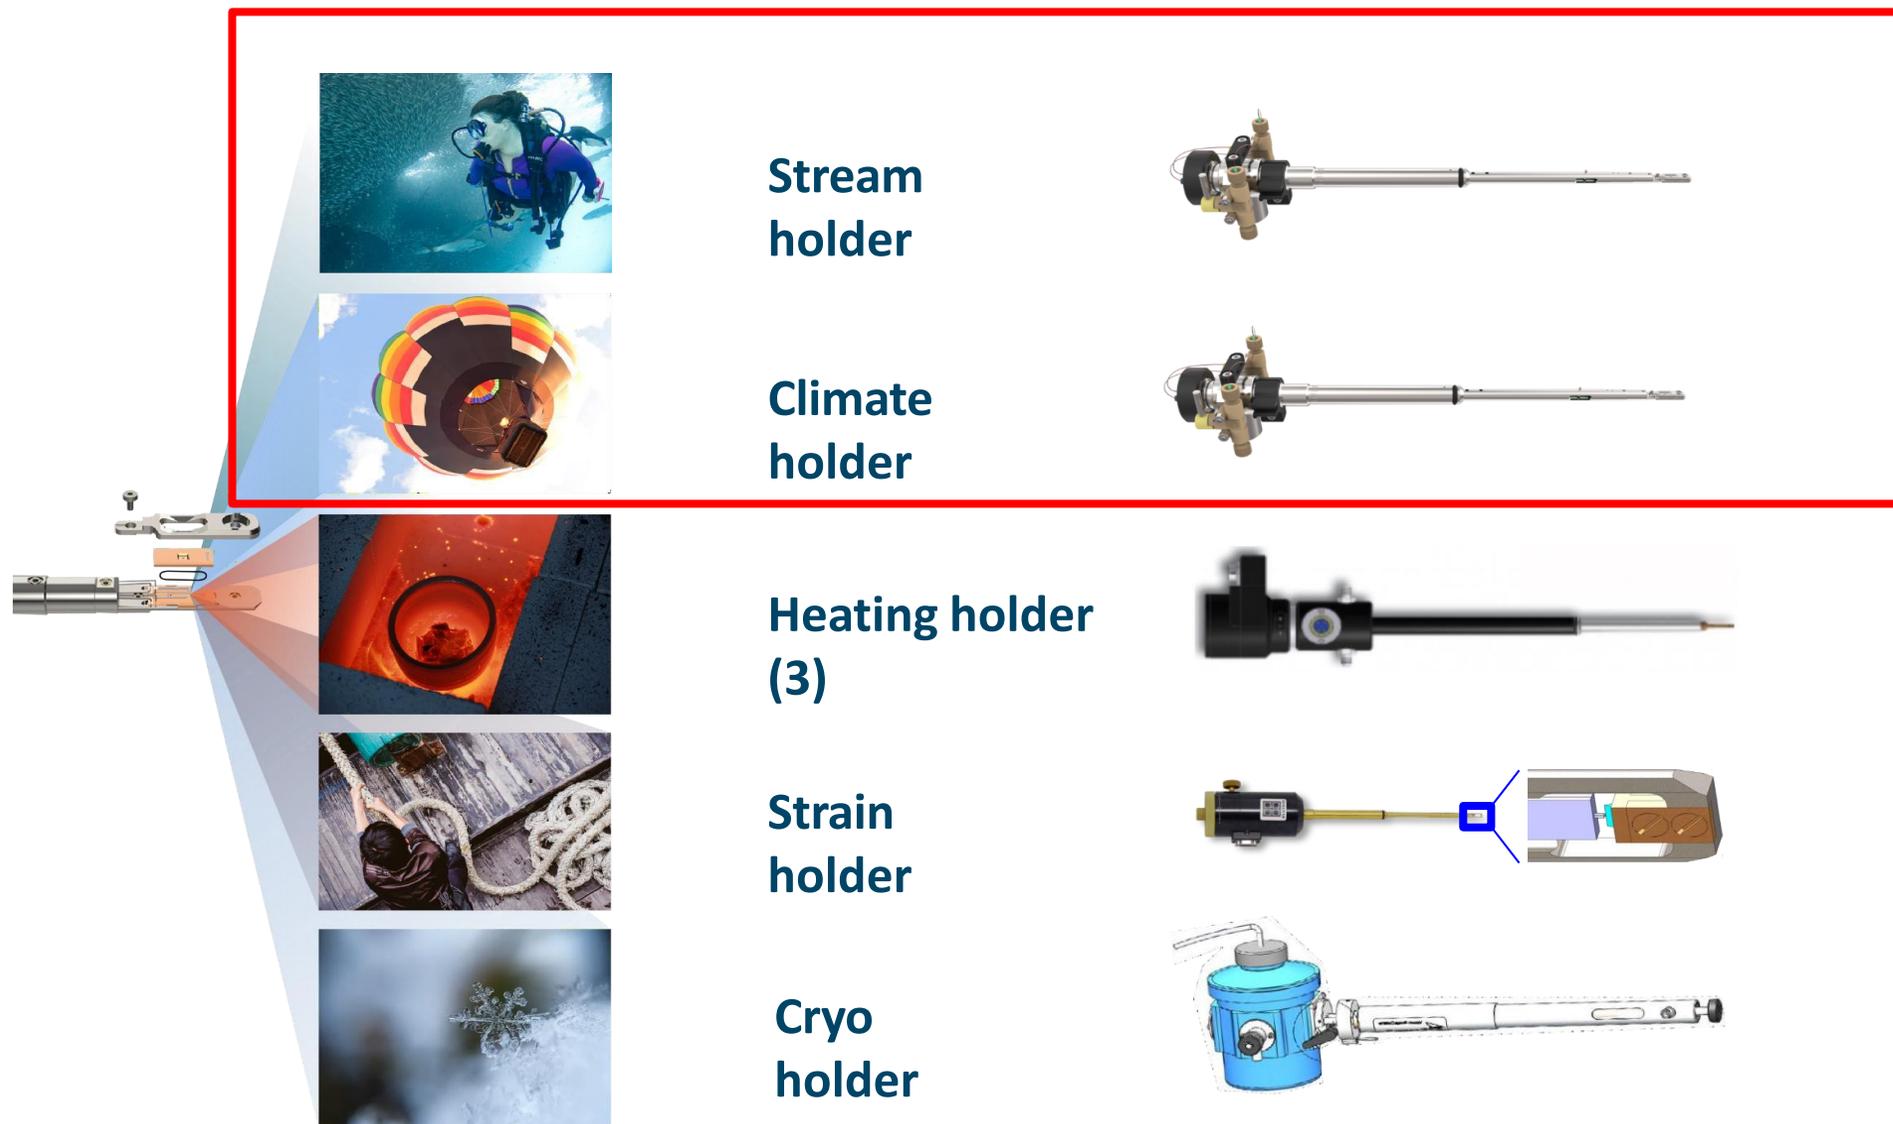

Sample 2: loading= 3.6 $\mu\text{g}/\text{cm}^2$

Sample 3: loading= 6 $\mu\text{g}/\text{cm}^2$
